Professional Summary

Software Engineer with 4+ years of experience designing automation-driven, API-centric, and data-intensive platforms across healthcare, e-commerce, and enterprise domains. Specialized in backend development, Python-based ETL pipelines, and cloud-native systems, delivering secure, scalable solutions and measurable operational impact.

Technical Skills

- **Languages:** Java, Python, JavaScript, C#, SQL, JavaScript.
- **Backend & APIs:** RESTful APIs, ASP.NET Core, Node.js.
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase.
- **Cloud & DevOps:** AWS (Lambda, S3, EC2), Docker, Kubernetes, Jenkins, Git, CI/CD
- **Data & Streaming:** Apache Kafka, ETL Pipelines, Informatic PowerCenter.
- **Automation & Reporting:** pandas, gspread, Real-time Dashboards, Financial Reporting Automation, HIPAA-compliant Data Handling.

Technical Experience

Software Engineer | SoCal Health INC | CA **April 2025 – Present**

- Leading development of a secure internal analytics and executive dashboard platform, enabling leadership and investors to monitor operational performance, financial metrics, and ROI across departments.
- Built backend data services and APIs to aggregate, normalize, and serve healthcare operational data (appointments, doctor performance, department KPIs) and financial metrics (revenue, investments, ROI).
- Developed Python-based ETL pipelines using pandas to extract data from billing and operational systems, transform it into standardized schemas, and load it into reporting layers powering dashboards and executive summaries.
- Integrated external billing platforms and internal systems with Google sheets, automating monthly and ad-hoc reporting workflows and eliminating manual data entry.
- Implemented role-based access control and data visibility logic to support leadership, operations, and investor reporting with appropriate permissions.
- Ensured secure authentication, access controls, and HIPAA-complaint data handling for sensitive healthcare and financial data.
- Enabled real-time and scheduled reporting for hospital performance, financial trends, and investment tracking through scalable backend services.
- Collaborated directly with leadership and stakeholders to define KPIs, reporting requirement, and backend architecture, translating business needs into scalable technical solutions.
- Reduced manual reporting effort by ~60% by automating data ingestion, transformation, and reporting pipelines.

Software Developer | Astute Solutions LLC | CA **October 2024 – March 2025**

- Developed and maintained backend components of enterprise web applications using ASP.NET MVC, C#, and .NET Core.
- Implemented application features, API endpoints, and bug fixes, translating business requirements into scalable backend solutions.
- Developed unit, system, and regression tests to ensure backend reliability and release readiness.
- Supported deployments across System Test, UAT, and Production environments, collaborating with QA and stakeholders to ensure stable releases.

Software Engineer | Kelly's Inc. | CA **January 2023 – May 2024**

- Developed and maintained backend services for a high-traffic e-commerce platform, supporting product search, user management, and payment workflows.
- Built and optimized RESTful APIs and backend logic using Java, Node.js, PHP, and ASP.NET Core.
- Designed and optimized MySQL database schemas and queries, improving performance for core e-commerce operations.
- Integrated AI-powered backend services, including an NLP chatbot using OpenAI's GPT API and ML models deployed via REST APIs.
- Owned backend feature delivery across the SDLC, from design and development to production deployment and support.

Associate Software Engineer | Carelon Global Solutions | India **August 2021 – July 2022**

- Responsible for migrating data from Siebel to Salesforce, by reducing data errors and ensuring a seamless transition.
- Developed and optimized SQL queries using Toad Developer to enhance ETL processes, increasing data processing speed and accuracy.
- Optimized data pipelines, improving data flow efficiency, reducing latency, and enhancing overall data accuracy.
- Implemented Informatica PowerCenter, applying advanced ETL transformations and workflow optimizations to improve system performance.
- Designed and validated complex ETL mappings, workflows, and data transformations, reducing data inconsistencies by 70% and ensuring accurate database updates.
- Conducted end-to-end testing of Salesforce data migration, achieving 100% data accuracy and ensuring seamless business continuity.

Junior Software Engineer | I2E Consulting | India **January 2021 – July 2021**

- Assisted in developing and deploying web applications using Java, contributing to codebase, and ensuring successful deployment to production.
- Debugged and resolved critical application issues, collaborating with senior developers to improve system stability and performance.
- Participated in Agile development methodologies, including daily stand-ups and sprint reviews, to drive team collaboration and iterative development.

Academic Experience

Teaching Assistant | California State University | SB, CA **January 2023 – May 2024**

- Assisted in teaching core Computer Science subjects including Web Development and Software Engineering Principles.
- Guided students on programming assignments and debugging sessions. Feedback on code quality and design patterns.

Education

California State University | San Bernardino | CA **August 2022 – May 2024**
M.S. Computer Science

Rajeev Gandhi University | India **August 2017 – July 2021**
B.Tech. Electronics and Communication Engineering

Projects

AI Pathfinding Algorithm: Implemented live traffic data to compute optimal travel paths using AI and demonstrated problem-solving using AI techniques.

Pet Bingo Game Application: Designed and developed an interactive game for children using Unity 3D and C#. Published on Amazon Play Store.

Streaming Data Pipeline with Apache Kafka: Built a real-time data pipeline with Apache Kafka by reducing data processing time by 40%, ensuring efficient streaming of large datasets.

Research Project: Low-Power SRAM Cells: Analyzed SRAM cells using NM technology and proposed optimizations for low-power design in modern processors.
