Portfolio: https://sha-rr.github.io/S_Repo/

Professional Summary

Software Engineer with 4+ years of experience designing, developing, testing, debugging, and deploying backend software, REST APIs, data-processing systems, and enterprise applications. Experienced in Python, Java, C#, JavaScript, SQL, API development, database management, Git, cloud technologies, and ETL engineering, improving operational efficiency through secure, scalable software. Experienced across the software development lifecycle, including requirements analysis, feature implementation, unit and regression testing, debugging, integration, production deployment, and technical collaboration.

Technical Skills

- **Languages:** Java, Python, JavaScript, C#, SQL.
- **Software Development:** Object-Oriented Programming, REST APIs, Backend Development, Unit Testing, Regression Testing, Debugging, SDLC, Agile.
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase.
- **Cloud & DevOps:** AWS Lambda, S3, EC2, Docker, Kubernetes, Jenkins, Git, CI/CD
- **Data & Integration:** Apache Kafka, Pandas, ETL Pipelines, Informatica PowerCenter.
- **Frameworks & APIs:** ASP.NET Core, .NET Core, Node.js, RESTful APIs, OpenAI APIs
- **Concepts:** Authentication, Role-Based Access Control, HIPAA Compliance, Reporting Automation.

Technical Experience

Software Engineer | SoCal Health INC | CA

April 2025 – Present

- Primary backend developer for a secure analytics platform, enabling leadership and investors to monitor operational performance, financial metrics, and ROI.
- Build backend services, REST APIs, and Python ETL pipelines (Pandas) to aggregate, normalize, and serve healthcare operational and financial data.
- Integrate internal healthcare systems, billing platforms, and Google Sheets to automate recurring reporting workflows, reducing manual reporting effort by approximately 60%.
- Implement role-based access control, secure authentication, and HIPAA-compliant data handling for sensitive healthcare information.
- Collaborate directly with executives and stakeholders to define reporting requirements, KPIs, and scalable backend architecture.
- **Designed, developed, and deployed two production healthcare websites, integrating appointment workflows, SEO optimization, and backend services.**

Software Developer | Astute Solutions LLC | CA

October 2024 – March 2025

- Developed and maintained backend components of enterprise web applications using ASP.NET MVC, C#, and .NET Core.
- Implemented application features, API endpoints, and bug fixes, translating business requirements into scalable backend solutions.
- Developed unit, system, and regression tests to ensure backend reliability and release readiness.
- Supported deployments across System Test, UAT, and Production environments, collaborating with QA and stakeholders to ensure stable releases.

Software Engineer | Kelly's Inc. | CA

January 2023 – May 2024

- Developed backend services for an e-commerce platform using Java, Node.js, and ASP.NET Core.
- Built and optimized RESTful APIs supporting product search, user management, and payment workflows.
- Designed and optimized MySQL schemas and queries to improve application performance.
- Integrated AI-powered chatbot capabilities using OpenAI APIs and deployed AI-powered backend services through REST APIs.
- Delivered backend features throughout the SDLC from development to production deployment.

Associate Software Engineer | Carelon Global Solutions | India

August 2021 – July 2022

- Migrated enterprise data from Siebel CRM to Salesforce while reducing data errors and ensuring seamless business continuity.
- Developed and optimized SQL queries using Toad Developer to enhance ETL processes, increasing data processing speed and accuracy.
- Optimized data pipelines, improving data flow efficiency, reducing latency, and enhancing overall data accuracy.
- Implemented Informatica PowerCenter, applying advanced ETL transformations and workflow optimizations to improve system performance.
- Designed and validated complex ETL mappings, workflows, and data transformations, reducing data inconsistencies by 70% and ensuring accurate database updates.
- Conducted end-to-end testing of Salesforce data migration, achieving 100% data accuracy and ensuring seamless business continuity.

Junior Software Engineer | I2E Consulting | India

January 2021 – July 2021

- Assisted in developing and deploying web applications using Java, contributing to the codebase, and ensuring successful deployment to production.
- Debugged and resolved critical application issues, collaborating with senior developers to improve system stability and performance.
- Participated in Agile development methodologies, including daily stand-ups and sprint reviews, to drive team collaboration and iterative development.

Academic Experience

Teaching Assistant | California State University | SB, CA

January 2023 – May 2024

- Assisted in teaching core Computer Science subjects including Web Development and Software Engineering Principles.
- Guided students on programming assignments and debugging sessions. Feedback on code quality and design patterns.

Education

California State University | San Bernardino | CA

August 2022 – May 2024

M.S. Computer Science

Rajeev Gandhi University | India

August 2017 – July 2021

B.Tech. Electronics and Communication Engineering

Founder | MedIn Assistant

Personal Healthcare Project | 2026 – present

- Designed and developed an AI-powered medical intake assistant that collects patient's symptoms through an adaptive conversational interface and generates structured clinical summaries for physicians before appointments.
- Collaborating with physicians from IPMG, Cajon Medical Group, Dr. Devadas Moses Clinic, and Dr. Narinder Singh Inc. to validate workflows and gather product feedback.

Selected Features (MVP):

1. Digital patient intake form (Name, Dob, Reason for visit, Symptoms, Medication, Allergies)
2. AI-generated symptom summaries: 3-5 bullet points for the doctor
3. Urgency flag – Low/Medium/High
4. Physician dashboard – Simple list of today's patients + summaries
5. PDF export of summary – Easy to print or paste into any EHR manually

HIPAA Considerations:

1. BAA (Business Associate Agreements)
2. Secure data handling
3. Minimal Internal Policies
4. HIPAA checklist (Encryption of sensitive patient information)

Build to reduce administrative workload in small healthcare clinics by automating patient intake and physician pre-visit summaries.

Tech Stack used:

Frontend – Next.js, AI – Claude API & Open AI, Backend – Supabase, Hosting – Cloudflare, Forms – Type form, Email provider – SendGrid.

Projects

Website development: Designed, developed, and deployed two production healthcare websites hosted on Cloudflare, enabling patients to discover providers, access clinic information, and request appointments online.

Live Demo:

- <https://drnarinder-singh.com/>
- <https://devadas-moses.com/>

These two websites deployed using CLOUDFLARE.

Successfully working for people to search for clinics and to know more about their providers.

AI Pathfinding Algorithm: Implemented live traffic data to compute optimal travel paths using AI and demonstrated problem-solving using AI techniques.

Pet Bingo Game Application: Designed and developed an interactive game for children using Unity 3D and C#. Published on Amazon Play Store.

Streaming Data Pipeline with Apache Kafka: Built a real-time data pipeline with Apache Kafka by reducing data processing time by 40%, ensuring efficient streaming of large datasets.

Research Project: Low-Power SRAM Cells: Analyzed SRAM cells using NM technology and proposed optimizations for low-power design in modern processors.
